#### 6-Line Cup Filling & Sealing Machine for 95 mm Round Cups

This fully equipped cup filling and sealing machine is designed for 95 mm round cups with 6 lines, ideal for ultra-clean and viscous products such as stirred yogurt, quark, rice milk, or other liquid products, featuring a sterile air system.

The machine includes an automatic cup infeed station with cup destacking and H<sub>2</sub>O<sub>2</sub> cup decontamination. It is equipped with a pre-doser for fruit pulp (10–50 ml) with three independent hoppers and a CIP-cleanable main doser. Lid dispensing is integrated with infrared decontamination, followed by heat sealing and a traverse for date coding (inkjet printer not included). The snap cap station is currently out of use.

An integrated automatic cup packer handles trays of 6 (3×2) or 12 (3×4) cups. A free-standing Siemens S5 control panel is included, and the line will remain operational until February 2026.

The machine is currently located at a factory in Belgium and is offered in good condition.
